SOWING AND GROWING
Best sown in trays or pots of good quality, moist, firmed seed compost at a depth of 6mm (¼") (Germination 30-50 days). Transplant seedlings when large enough to handle, spacing them 5cm (2") apart in trays or individual pots. Plant 30cm x 30cm (12 x 12") in their final position during the autumn for flowering the following spring.
Flowers are more double the second year onwards.
HELPFUL HINT After flowering, cut back the old stems to encourage the production of further blooms.
Quality Control: This seed has been carefully tested to ensure high germination. Prior to use, store in a dry cool place.
