SOWING AND GROWING

Sow March to May about 6mm (¼") deep, direct into a moist, warm soil. Germination normally takes 5-10 days. Thin seedlings out in stages to achieve a final spacing of about 30cm (6"). For earlier flowering may also be sown in a propagator on a windowsill or in a greenhouse at approx. 18-21°C (65-70°F) using a good quality moist compost. Cover the seeds with 6mm (¼") sieved compost. Transplant seedlings into further trays and grow on. Acclimatise plants to outside conditions before planting out.
