**SOWING AND GROWING**

Fill a seed tray with a good quality moist seed compost. Carefully cut the tip off the plastic phial and tap the seeds out singly, pressing gently into the surface about 12mm (½") apart, or 5cm (2") apart to avoid later transplanting. Place a sheet of glass or polythene over the tray and germinate at 18-20°C (65-70°F). Keep moist and protect from direct sunlight (Germination 15-50 days). As seedlings develop transplant as necessary and grow on. Acclimatise to outside conditions before planting out 20cm (8") apart.

 **SUPASEEDS** - each individual seed is specially coated for easier handling

**Quality Control:** This seed has been carefully tested to ensure high germination. Prior to use, store in a dry cool place.

**Important:** F1 Hybrid seed is expensive to produce and should be handled with care.
